Subject Index of Volume 46

Agglomerate-of-spheres model
the agglomerate-of-spheres model. Theoretical considerations, 211
PbO_2 active material as an electrocrystalline network, 219
Alkalization model
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, 263
Alloys
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, 311
Anodic layer
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, 263
Antimony
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, 1
electrolyte stratification in lead/acid batteries: Effect of grid antimony and relationship to capacity loss, 239
Antimony-free grids
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, 191

Batteries
heat generation of electrochemical systems. Batteries, 29

Calcium
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leq 25$ at.%, 299
Capacity
aspects of lead/acid battery technology. 6. Designing for capacity, 73
Carbon electrodes
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, 61
Cast-on-strap process
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, 311
Charge behaviour
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, 383
Cycle life
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, 383

Discharge behaviour
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, 231

Electrochemical oxidation
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, 17
Electrodes
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, 17
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, 231
Electrolyte diffusion
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, 49
Electrolyte stratification
electrolyte stratification in lead/acid batteries: Effect of grid antimony and relationship to capacity loss, 239
Ethylene glycol
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation

on various noble metal electrodes in alkaline medium, 17
Expander's stability
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, 349

Fast charging
fast charging of lead/acid batteries, 375
Flooded lead/acid batteries
evaluating the state-of-health of flooded and valve-regulated lead/acid batteries. A comparison of conductance testing with traditional methods, 391
Fuel cells
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, 61

Glass microspheres
modeling lead/acid batteries that have positive electrodes containing hollow, glass microspheres, 39
Gold
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, 17

Heat generation
heat generation of electrochemical systems Batteries, 29

Lead
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leq 25$ at.%, 299
Lead/acid batteries
modeling lead/acid batteries that have positive electrodes containing hollow, glass microspheres, 39
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, 49
aspects of lead/acid battery technology. 6. Designing for capacity, 73
aspects of lead/acid battery technology. 7. Separators, 117
a lead/acid battery for the new millennium, 159
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, 171
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, 191
location of the phenomena of premature capacity loss during cycling of lead/acid batteries with lead grids, 203
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, 231
electrolyte stratification in lead/acid batteries: Effect of grid antimony and relationship to capacity loss, 239
a simplified model of the lead/acid battery, 251
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, 263
processes during preparation of lead/acid battery positive plates from tetrabasic lead sulfate (4BS) pastes, 269
performance characteristics of lead oxides in pasted lead/acid battery electrodes, 285
lead alloys for maintenance-free and sealed lead/acid batteries, 327
processes in positive lead/acid battery plates during soaking prior to formation, 337
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, 349
valve-regulated lead/acid batteries: systems, properties and applications, 361
fast charging of lead/acid batteries, 375
Lead alloys
lead alloys for maintenance-free and sealed lead/acid batteries, 327
Lead–antimony alloy
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, 311
Lead–calcium alloy
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, 311
Lead dioxide
the agglomerate-of-spheres model. Theoretical considerations, 211

PbO_2 active material as an electrocrystalline network, 219
Lead dioxide plates
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, 171
Lead electrodes
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, 1
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, 263
Lead hardening
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leq 25$ at.%, 299
Lead oxide electrodes
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, 231
Lead oxides
performance characteristics of lead oxides in pasted lead/acid battery electrodes, 285
Lead sulfate
processes during preparation of lead/acid battery positive plates from tetrabasic lead sulfate (4BS) pastes, 269

Nafion®
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, 61

Palladium
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, 17
Paste conductivity
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, 49
Phosphoric acid
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, 1
Planté Medal Address
the Gaston Planté Medal Presentation Address, 149
the Gaston Planté Medal Address, 151
Planté Medallist
Paul Ruetschi: The Gaston Planté Medallist 1993, 147
Platinum
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, 17
Positive electrodes
modeling lead/acid batteries that have positive electrodes containing hollow, glass microspheres, 39
Positive plates
processes in positive lead/acid battery plates during soaking prior to formation, 337
Premature capacity loss
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, 171
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, 191
location of the phenomena of premature capacity loss during cycling of lead/acid batteries with lead grids, 203
electrolyte stratification in lead/acid batteries: Effect of grid antimony and relationship to capacity loss, 239
Proton-conducting electrolytes
performance of a solid-state battery with a proton-conducting electrolyte, 65

Separators
aspects of lead/acid battery technology. 7. Separators, 117
Simulation model
a simplified model of the lead/acid battery, 251
Soaking
processes in positive lead/acid battery plates during soaking prior to formation, 337

Solid polymer electrolyte
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, 61
Solid-state batteries
performance of a solid-state battery with a proton-conducting electrolyte, 65
State-of-health
evaluating the state-of-health of flooded and valve-regulated lead/acid batteries. A comparison of conductance testing with traditional methods, 391
Storage
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, 383
Sulphuric acid
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, 1

Tin
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leq 25$ at.%, 299

Valve-regulated lead/acid batteries
a lead/acid battery for the new millennium, 159
valve-regulated lead/acid batteries: systems, properties and applications, 361
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, 383
evaluating the state-of-health of flooded and valve-regulated lead/acid batteries. A comparison of conductance testing with traditional methods, 391
